Summary

I'm a Senior Full Stack Engineer with more than nine years of experience building complex web applications, working across Node.js, AngularJS, AWS, MySQL, and AI-driven features like document processing and secure cloud storage. A lot of my work has focused on modernizing backend systems, improving scalability, and strengthening platform reliability.

I've led initiatives that improved scalability by about 40% and reduced MTTR by 30% through better monitoring, faster troubleshooting, and rapid bug resolution. I also build automated validation systems, computer vision workflows, and AI-powered solutions that cut down manual audit work while keeping performance, security, and scalability front and center.

Overall, I'm known for being resourceful, persistent, and strong at collaborating across teams — and for turning complex technical challenges into clean, reliable, production-ready solutions.

Key Skills

- **BackEnd:** Node.js, Express.js, NestJS, Server Side Templating, RESTful APIs, GraphQL, Microservices, OAuth2, SOAP APIs
- **FrontEnd:** Angular JS, Angular, HTML, CSS, JavaScript, jQuery, TypeScript, React, Next.js, Vue
- **AI and Document Processing:** AI/ML Implementation, Document Analysis, Computer Vision, OCR, Automated Validation Systems, AI Document Comparison, OpenAI APIs, TensorFlow.js, Gemini
- **Cloud:** AWS, S3, EC2, RDS, Lambda, API Gateway, SQS, SNS, CloudWatch, IAM, Cloud Storage
- **Database:** MySQL, PostgreSQL, MongoDB, DynamoDB, Oracle, MS SQL, Supabase, Snowflake
- **DevOps and CI/CD:** Docker, Kubernetes, Jenkins, GitHub Actions, AWS CodePipeline, Terraform, Ansible
- **Tools and Frameworks:** Redis, Kafka, Git, Jira, Confluence, Datadog, Selenium, Jest, Mocha, Chai
- **Professional Competencies:** Problem solving, Adaptability, Flexibility, Creativity, Curiosity, Emotional intelligence, Persistence, Relationship-building, Resourcefulness, Communication, Listening and Clarification

PROFESSIONAL EXPERIENCE

KYC Hospitality

Senior Full Stack Engineer

United States

(Jul 2022 ~ May 2026)

- Transformed a PHP Laravel backend into Node.js Express microservices, improving scalability, maintainability, and daily release reliability by 40% across complex web applications
- Architected cloud native services with GCP, Cloud Run, Spanner DB, Kafka, and secure storage patterns while maintaining openness to AWS aligned, reliable technologies
- Augmented internal delivery workflows with Gemini and Telosys automation for database entities, Kafka topics, and Node.js domain models, reducing repetitive engineering effort by 35%
- Diagnosed production defects across distributed APIs, queues, and front end flows, lowering mean time to recovery by 30% through Datadog monitoring, alerting, and rapid bug fixes
- Constructed reusable React, JavaScript, HTML, and CSS components that improved page performance by 20% through lazy loading, code splitting, and lifecycle optimization

- Orchestrated CI/CD pipelines with Docker, GKE, and Jenkins, cutting release cycle time by 25% while preserving secure, demoable progress for weekly plans
- Fortified backend reliability through contract testing, Jest, Mocha, Chai, TestContainers, and Selenium, supporting fast patches and team identified issue resolution
- Collaborated with designers, developers, operations, and stakeholders to clarify requirements, refine estimates, and deliver quality applications with steady sprint visibility
- Cultivated relationship-building, emotional intelligence, and persistence through code reviews and mentoring that strengthened team ownership and production readiness

Everyrealm

Backend Engineer / Full Stack Engineer

New York (US)
(May 2020 ~ May 2022)

- Designed scalable web applications using Node.js, Express.js, Angular 11, React 17, HTML, CSS, JavaScript, and intelligent UI components powered by OpenAI APIs and TensorFlow.js
- Implemented AWS infrastructure with EC2, S3, API Gateway, Lambda, SQS, SNS, IAM, RDS, DynamoDB, CloudWatch, CloudTrail, and VPC for secure, highly available systems
- Integrated MySQL compatible data storage, RDS, DynamoDB, Redis caching, and optimized indexing strategies, reducing server response times by 30% under high load
- Pioneered AI driven anomaly detection with Amazon Lookout for Metrics, DevOps Guru, and ML enabled health checks to streamline troubleshooting and identify automation opportunities
- Refactored backend services using clean architecture, SOLID principles, API design standards, and server side frameworks to strengthen scalability and security
- Established CI/CD automation with Jenkins, Docker, Kubernetes, Ansible, AWS CodePipeline, and GitHub Actions, accelerating secure deployments and daily updates
- Resolved on call backend incidents across event driven services, queues, APIs, and cloud integrations with resourcefulness and strong problem solving under tight timelines
- Partnered with front end, QA, DevOps, data science, and product stakeholders to translate complex business requirements into technical solutions and production ready services
- Advanced team mastery of AI/ML implementation, prompt engineering, Hugging Face, SageMaker, LangChain, and LangSmith through reviews, walkthroughs, and pair programming

Softwire

Full Stack Engineer

United Kingdom
(Jan, 2017 ~ Mar 2020)

- Engineered e commerce and business web applications with Python, Django, Angular, React, HTML, CSS, JavaScript, jQuery, REST APIs, and MySQL backed workflows
- Rebuilt checkout and customer journey modules, lifting conversion by 30% through responsive interfaces, reliable backend support, and streamlined data validation
- Remediated 100+ critical issues across payment gateways, Java services, API integrations, and front end rendering defects, reducing system downtime by 40%
- Optimized SQL queries, Redis caching, REST endpoints, and headless architecture patterns, cutting page load time by 50% while supporting performance and scalability requirements
- Authored 500+ automated tests using JUnit, Jasmine, Karma, and Selenium, reducing production defects by 60% and improving confidence for rapid patches
- Modernized legacy systems into Spring Boot microservices and modular Angular components, trimming infrastructure cost by 20% and improving maintainability
- Secured healthcare, finance, and hospitality applications with OAuth2, Spring Security, input validation, and data integrity controls aligned to reliable application delivery
- Facilitated Agile ceremonies, sprint planning, Jira tracking, estimate updates, and stakeholder demos to ensure weekly plans stayed current and progress remained visible
- Applied curiosity, flexibility, creativity, and sophisticated knowledge to clarify ambiguous requirements and convert detailed business processes into dependable technical solutions

Education

Bachelor of Science in Computer Science

City of Malabon University

2013 2017
